

Japanese Economy: Analysis and Forecasts No.129

7 September, 2020

A Macroeconomic Analysis Project

- ▶ This report is a summary of the economic analyses and forecasts put together by APIR's macroeconomic analysis project team.
- ▶ The project team consists of young professionals from member companies and APIR researchers, and is headed by Yoshihisa Inada, Director of the APIR Center for Quantitative Economic Analysis and Professor at Konan University.
- ▶ This report and the forecasts in it were co-authored by Yoshihisa Inada and Mitsuru Shimoda from the Japan Applied Research Institute.
- ▶ This project is part of a 40-year research collaboration between young business professionals and academics, and its forecasts are widely used.
- ▶ The project was originally established by Chikashi Moriguchi and Kanemi Ban, Professors Emeritus of Osaka University. Since 2005 it has evolved into an endeavor to incorporate Current Quarter Model forecasts into the existing quarterly macroeconomic forecast model.
- ▶ Aiming to provide a timely response to changes in the economy, the report has been published quarterly since 2004.

Forecast Highlights

Finding the balance between ensuring economic recovery and containing the second wave of Covid-19: toward a trial-and-error solution

- ◆ According to the first advance estimates released on August 17th, Japan's Q2 real GDP contracted an annualized -27.8% QoQ. Q2 was the third consecutive quarter of negative growth. The decline rate was similar to the latest market consensus forecast (-26.59%). Our latest CQM forecast was an annualized -22.6%, the average of the expenditure-side (-25.0%) and the production-side (-20.2%) forecasts.
- ◆ Japan's Q2 real GDP declined by JPY -41.1 trillion, reflecting the decline in demand-side factors, especially private final consumption expenditure and goods exports. The impact of the state of emergency on domestic private final consumption expenditure is clearly visible. So is the impact of the global economic disruption, brought about by worldwide lockdowns, which put downward pressure on exports. The determinants of GDP decline in Q2 were different from Q1, when the GDP contraction (JPY -3.3 trillion) was caused by a mix of supply-side factors, such as declining imports from China, and demand-side factors, including stagnant private final consumption expenditure and services exports.
- ◆ The economic downturn, which followed the peak of the current economic cycle in October 2018, seems to have reached a trough in May, when the state of emergency was lifted. However, as the current economic recovery coincides with a second wave of Covid-19, a fine balance between ensuring social distancing and stimulating economic activities is essential. For that reason, Japan's economic recovery is likely to be slow.
- ◆ Reflecting the first advance Q1 GDP estimates, we updated our real GDP growth forecast to -5.9% in FY 2020. This will be the first year of negative growth in six years. In FY 2021, we forecast a positive growth of +3.3% due to the expected post-pandemic rebound. However, the GDP will not reach its pre-pandemic level until after FY 2022. Compared with our previous report (No. 128), we have revised the FY 2020 forecast down by -0.3%pt, and the FY 2021 forecast up by +0.8%pt.
- ◆ Based on the trends in monthly indicators, most of which show substantial improvements in June, the trough of the current economic cycle seems to have been reached in May. On a quarterly basis, we expect to see a rebound of over +10% QoQ in Q3. The growth rate will temporarily remain higher than the potential growth rate, due to the post-pandemic rebound. However, in terms of YoY changes, GDP growth will remain in negative territory 2019 Q4 throughout 2021 Q1.
- ◆ The output gap, which turned negative in 2019 Q2, is likely to deteriorate for some time. Stagnant domestic and external demand might exert substantial deflationary pressure. Although the decline in energy prices has decelerated, the government's free childcare program and the partial to complete elimination of tertiary education fees will both put downward pressure on CPI inflation. Considering these trends, as well as the supply-demand gap, we forecast core CPI inflation of -0.3% in FY 2020, and +0.4% in FY 2021.

Summary of Forecast Results

| | Current forecast (2020/8/27) | | | | Previous forecast (2020/5/28) | | | |
|---|------------------------------|-------|--------|-------|-------------------------------|-------|--------|-------|
| | 2017 | 2018 | 2019 | 2020 | 2018 | 2019 | 2020 | 2021 |
| Real GDP (%) | 0.3 | 0.0 | ▲ 5.9 | 3.3 | 0.3 | ▲ 0.1 | ▲ 5.6 | 2.5 |
| Private demand (contribution) | 0.2 | ▲ 0.4 | ▲ 4.5 | 2.0 | 1.3 | ▲ 0.5 | ▲ 4.3 | 2.0 |
| Private final consumption expenditure (%) | 0.1 | ▲ 0.6 | ▲ 6.1 | 3.4 | 0.1 | ▲ 0.6 | ▲ 4.9 | 3.5 |
| Private residential investment (%) | ▲ 4.9 | 0.5 | ▲ 6.3 | ▲ 0.9 | ▲ 4.9 | 0.3 | ▲ 8.3 | 2.4 |

Notes: In the quarterly statistics, the figures in the first and second rows below the main series represent QoQ changes (%) and YoY changes (%) respectively. In the annual statistics, the figures under the main series represent YoY changes (%). In the GDP statistics (real, nominal, deflator), the first and second rows represent and QoQ and YoY growth rates (%) respectively. The YoY values were calculated using seasonally adjusted data, so they might differ from the official figures, which are not seasonally adjusted. Highlighted columns represent actual values.

Notes: In the quarterly statistics, the figures in the first and second rows below the main series represent QoQ changes (%) and YoY changes (%) respectively. In the annual statistics, the figures under the main series represent YoY changes (%). Highlighted columns represent actual values. The "engaged labor force" category includes both self-employed and employed workers. The "employed" category excludes self-employed workers.
