

Japanese Economy: Analysis and Forecasts No.137

1 March, 2022

A Macroeconomic Analysis Project

- ▶ This report is a summary of the economic analyses and forecasts put together by APIR's macroeconomic analysis project team.
- ▶ The project team consists of young professionals from member companies and APIR researchers, and is headed by Yoshihisa Inada, Director of the APIR Center for Quantitative Economic Analysis and Professor Emeritus of Konan University.
- ▶ This report and the forecasts in it were co-authored by Yoshihisa Inada and Mitsu Shimoda from the Japan Applied Research Institute.
- ▶ This project is part of a 40-year research collaboration between young business professionals and academics, and its forecasts are widely used.
- ▶ The project was originally established by Chikashi Moriguchi and Kanemi Ban, Professors Emeritus of Osaka University. Since 2005 it has evolved into an endeavor to incorporate Current Quarter Model forecasts into the existing quarterly macroeconomic forecast model.
- ▶ Aiming to provide a timely response to changes in the economy, the report has been published quarterly since 2004.

Forecast Highlights

Japan's economic recovery will stall: new covid-19 variants, high energy prices and weak exchange rate pose risks

– Real GDP will grow +2.4% in FY 2021, +2.3% in FY 2022, +1.7% in FY 2023 –

- ◆ According to the first advance GDP estimate released on February 15, Japan's real GDP increased an annualized 5.4% YoY (+1.3% QoQ) in 2021 Q4, marking the first positive growth in two quarters. The figure was somewhat lower than the market consensus forecast of an annualized +6.06% (ESP February survey) and APIR's forecast of +6.7% QoQ (the average of the expenditure-side CQM forecast of +6.5%, and the production-side forecast of +6.8%).
- ◆ In 2021 Q4, the consumer sentiment improved significantly due to a decline in the number of COVID-19 infections, and private final consumption expenditures showed a strong performance. A breakdown of QoQ GDP growth (+1.3%) shows that domestic demand made a positive contribution for the first time in two quarters (+1.1%pt). Therein, private demand made a positive contribution for the second consecutive quarter (+1.3%pt), while public demand made a negative one for the first time in three quarters (-0.2%pt). Net exports made a positive contribution for the second straight quarter (+0.2%pt), as a result of increasing semiconductor exports. However, due to the deteriorating terms of trade, gross domestic income (GDI) growth remained at +0.7% QoQ, remaining lower than real GDP growth for the fourth consecutive quarter.
- ◆ We revised our outlook for the Japanese economy for FY 2021-2023, reflecting the first advance estimate of 2021 Q4 GDP, as well as some new assumptions about exogenous variables. We now forecast real GDP growth of +2.4% in FY 2021, +2.3% in FY 2022, and +1.7% in FY 2023. Compared to our previous forecast, the figures for FY 2021 and FY 2022 were revised down by -0.3%pt, while the FY2023 figure remained unchanged. The forecast update reflects the economic slowdown in 2022 Q1 caused by the spread of Omicron.
- ◆ Although Japan's real GDP grew for the first time in two quarters in 2021 Q4, its recovery was slower than in other major countries. In 2022 Q1, economic activity stagnated due to the rapid expansion of the Omicron variant. In 2022 Q2, the pace of growth is expected to remain above the potential growth rate. As a result, the GDP is expected to recover to its pre-Corona level (2019 Q4) in 2022 Q2. However, it will exceed its pre-Corona peak (2019 Q3) only in 2023 Q2.
- ◆ Regarding the outlook for the consumer price index, accommodation and telecommunication charges are likely to disturb the underlying inflation trend in FY 2021. In FY 2022, the increase of the CPI will be in the upper 1% range due to soaring energy prices and the weak yen. In FY 2023, the underlying CPI trend will be subdued as energy prices will decline and service prices will exert downward pressure. As a result, we forecast CPI core inflation of -0.0% in FY 2021, +1.4% in FY 2022, and +0.8% in FY 2023.
- ◆ Our baseline projection assumes progress in booster vaccinations, a low number of new COVID-19 infections, and a widespread use of therapeutic drugs. We also assume three risks: (1) the emergence of new COVID-19 variants, (2) a sharp rise in oil prices, and (3) an acceleration in the depreciation of the yen. The Japanese-language issue of this report contains our simulations of the impact of these risks, including a situation in which crude oil prices exceed USD 100 per barrel due to the Russian invasion of Ukraine.

Notes: In the quarterly statistics, the figures in the first and second rows below the main series represent QoQ changes (%) and YoY changes (%) respectively. In the GDP quarterly series, the first row below the main series represents annualized QoQ changes (%), the second and third rows are QoQ and YoY changes (%), respectively. In the annual statistics, the figures under the main series represent YoY changes (%). Highlighted columns represent actual values.

Notes: SNA = System of National Accounts. BOP = Balance of Payments. In the quarterly statistics, the figures in the first and second rows below the main series represent QoQ changes (%) and YoY changes (%) respectively. In the annual statistics, the figures under the main series represent YoY changes (%). Highlighted columns represent actual values.
