

Japanese Economy: Analysis and Forecasts No.139

29 August, 2022

A Macroeconomic Analysis Project

► This report is a summary of the economic analyses and forecasts put together by APIR's macroeconomic analysis project team.

► The project team consists of young professionals from member companies and APIR researchers, and is headed by Yoshihisa Inada, Director of the APIR Center for Quantitative Economic Analysis and Professor Emeritus of Konan University.

► This report and the forecasts in it were co-authored by Yoshihisa Inada and Mitsu Shimoda from the Japan Applied Research Institute.

► This project is part of a 40-year research collaboration between young business professionals and academics, and its forecasts are widely used.

► The project was originally established by Chikashi Moriguchi and Kanemi Ban, Professors Emeritus of Osaka University. Since 2005 it has evolved into an endeavor to incorporate Current Quarter Model forecasts into the existing quarterly macroeconomic forecast model.

► Aiming to provide a timely response to changes in the economy, the report has been published quarterly since 2004.

Forecast Highlights

Growth rate revised downward to reflect weak export prospects

- Real GDP growth forecast: +1.5% in FY2022, +1.5% in FY2023 -

- ◆ According to the first advance GDP estimate released on August 15, Japan's real GDP grew by annualized +2.2% QoQ in Q2 (+0.5% QoQ). This marked the third consecutive quarterly increase, as the Q1 figure was revised upward from -0.5% QoQ to +0.1% QoQ. In addition, Japan's real GDP for FY 2021 was revised upward by 0.1%pt to +2.3% YoY. These revisions reflect changes in the calculation of public investment (fixed capital formation) caused by the retroactive revision of the improperly handled statistics on construction orders prior to January 2012.
- ◆ In terms of the contribution to real GDP growth in Q2 (+0.5% QoQ), domestic demand made a positive contribution for the third consecutive quarter (+0.5%pts QoQ). Therein, private demand contributed +0.3%pts, marking the third consecutive quarter of positive contribution. The lifting of the COVID-19 restrictions was a major factor driving growth, with private final consumption expenditures contributing +0.6%pts. Public demand propped up growth too (+0.2%pts), making a positive contribution for the first time in three quarters. In contrast, real gross domestic income (GDI) growth, which factors in trade gains resulting from changes in terms of trade, was -0.3% QoQ (annualized -1.2% QoQ), marking the second consecutive quarterly decline. As compared to the GDP, the GDI can be said to better reflect the true economic state of firms and households.
- ◆ We revised our outlook for the Japanese economy in FY 2022-2023, reflecting the first advance GDP estimate for Q2, as well as our new assumptions about exogenous variables. We now forecast real GDP growth of +1.5% in FY 2022, and +1.5% in FY 2023. Compared to our previous forecast (No. 138), both figures were revised downward, by -0.4%pts in FY 2022 and -0.3%pts in FY 2023, respectively. Among our assumptions about exogenous variables, the persistently high price of crude oil and the accelerating depreciation of the yen led to the downward revision in our forecast for FY 2022. On the other hand, the stagnation of world trade led to the downward revision in our forecast for FY 2023. The effects of rising inflation due to Russia's invasion of Ukraine, the slowdown in the global economy, and tight monetary policies will exert downward pressure on the global economy from the second half of 2022 through the first half of 2023.
- ◆ On a quarterly basis, real GDP in Q2 exceeded its pre-pandemic level (2019 Q4) for the first time. However, it is still 2.7% below its pre-pandemic peak (2019 Q2). In this sense, the pace of recovery has been very slow. Since net exports are not expected to pick up for some time after Q3, as long as the resurgence of COVID-19 does not lead to any restrictions on economic activities, the consumption of services is likely to keep expanding, thereby pushing GDP growth above the potential growth rate. In any case, it will exceed the pre-pandemic peak in FY 2024.
- ◆ In the second half of FY 2022, the YoY CPI inflation will remain in the upper 2% range due to the impact of energy and food price hikes. In FY 2023, the underlying CPI trend is expected to decelerate as the impact of energy prices will fade, and service prices will exert downward pressure. As a result, we forecast core CPI inflation of +2.3% in FY 2022 and +1.0% in FY 2023. Compared to our previous forecast, both figures were revised upward, by +0.5%pts in FY 2022 and +0.2%pts in FY 2023, respectively.

Notes: In the quarterly statistics, the figures in the first and second rows below the main series represent QoQ changes (%) and YoY changes (%) respectively. In the annual statistics, the figures under the main series represent YoY changes (%). In the GDP statistics (real, nominal, deflator), the first and second rows represent and QoQ and YoY growth rates (%) respectively. The YoY values were calculated using seasonally adjusted data, so they might differ from the official figures, which are not seasonally adjusted. Highlighted columns represent actual values.

Notes: In the quarterly statistics, the figures in the first and second rows below the main series represent QoQ changes (%) and YoY changes (%) respectively. In the GDP quarterly series, the first row below the main series represents annualized QoQ changes (%), the second and third rows are QoQ and YoY changes (%), respectively. In the annual statistics, the figures under the main series represent YoY changes (%). Highlighted columns represent actual values.

Notes: In the quarterly statistics, the figures in the first and second rows below the main series represent QoQ changes (%) and YoY changes (%) respectively. In the annual statistics, the figures under the main series represent YoY changes (%). Highlighted columns represent actual values. The "engaged labor force" category includes both self-employed and employed workers. The "employed" category excludes self-employed workers.
