

Japanese Economy: Analysis and Forecasts No.142

28 February, 2023

A Macroeconomic Analysis Project

► This report is a summary of the economic analyses and forecasts put together by APIR's macroeconomic analysis project team.

► The project team consists of young professionals from member companies and APIR researchers, and is headed by Yoshihisa Inada, Director of the APIR Center for Quantitative Economic Analysis and Professor Emeritus of Konan University.

► This report and the forecasts in it were co-authored by Yoshihisa Inada and Mitsu Shimoda from the Japan Applied Research Institute.

► This project is part of a 40-year research collaboration between young business professionals and academics, and its forecasts are widely used.

► The project was originally established by Chikashi Moriguchi and Kanemi Ban, Professors Emeritus of Osaka University. Since 2005 it has evolved into an endeavor to incorporate Current Quarter Model forecasts into the existing quarterly macroeconomic forecast model.

► Aiming to provide a timely response to changes in the economy, the report has been published quarterly since 2004.

Forecast Highlights

Soaring inflation and global economic slowdown take a toll on the Japanese economy

- Real GDP growth forecast: +1.3% in FY 2022, +0.9% in FY 2023, +1.5% in FY 2024 -

- ◆ According to the first advance GDP estimate for 2022 Q4, Japan's real GDP grew at an annualized rate of +0.6% YoY (+0.2% QoQ), marking the first expansion in two quarters. However, the recovery was modest and did not make up for the decline in 2022 Q3. Real GDP growth in 2022 Q4 was lower than both the market consensus (final estimate (ESP Forecast February survey: +2.43% YoY) and APIR's CQM final estimate (+2.2% YoY).
- ◆ Looking at contributions to real GDP growth (+0.2% QoQ) in 2022 Q4, domestic demand made a negative contribution for the first time in five quarters (-0.2 percentage points). Therein, private-sector demand suppressed growth by -0.3 percentage points, making the first negative contribution in five quarters, caused by declines in private housing, private investment, and changes in private inventories. In contrast, public-sector demand propped up growth by +0.1 percentage points, marking the third positive quarterly contribution in a row. Net exports made a positive contribution for the first time in two quarters too (+0.3 percentage points).
- ◆ Japan's real GDI growth exceeded its real GDP growth for the first time in ten quarters, as the terms of trade improved for the first time in eight quarters. This has somewhat eased the outflow of income by households and firms to other countries.
- ◆ We have revised our outlook for the Japanese economy for FY 2022-24, incorporating the first advance estimate of GDP for 22 Q4 as well as our new assumptions about exogenous variables. We now forecast real GDP growth of +1.3% in FY 22, +0.9% in FY 23, and +1.5% in FY 24. The downward revisions for FY 22 and FY 23 are due to a deterioration in the outlook for the contributions of private-sector demand and net exports. We also forecast real GDI growth rates of -0.4% in FY22, +1.7% in FY23, and +1.5% in FY24.
- ◆ We assume that no new constraints on economic activities will be imposed on households throughout the forecast period. In the second half of FY 2023, when inflation is expected to decelerate, accumulated "forced" savings are likely to be unleashed, leading to a recovery led by private final consumption expenditure, especially spending on services. On the other hand, since the global economy will remain sluggish in FY 23, especially in EU and the U.S., a negative contribution by net exports is inevitable. Since the contribution of private-sector demand is likely to decelerate, FY 23 growth is projected to be lower than FY 22. As a result, real GDP is unlikely to exceed its pre-pandemic peak until 24 Q2, taking about five years (19 quarters) to recover.
- ◆ The core CPI inflation is currently above 4% YoY. Energy prices will be a disturbing factor in the trend of consumer price index for some time, partly due to the government's economic policy. However, the high prices of raw materials as well as the weak yen are likely to settle down in the second half of FY 2023, which will cause inflation to decelerate. We forecast the CPI inflation rate to be +3.1% in FY 22, +2.2% in FY 23, and +1.3% in FY 24. Compared to our last report, we have revised these forecasts upward respectively by +0.1, +0.2, and +0.1 percentage points in order to reflect the latest economic conditions.

Notes: SNA = System of National Accounts. BOP = Balance of Payments. In the quarterly statistics, the figures in the first and second rows below the main series represent QoQ changes (%) and YoY changes (%) respectively. In the annual statistics, the figures under the main series represent YoY changes (%). Highlighted columns represent actual values.
