

Japanese Economy: Analysis and Forecasts No.145

29 November, 2023

A Macroeconomic Analysis Project

► This report is a summary of the economic analyses and forecasts made by APIR's macroeconomic analysis project team.

► The project team consists of young professionals from member companies and APIR researchers, and is headed by Yoshihisa Inada, Director of the APIR Center for Quantitative Economic Analysis and Professor Emeritus of Konan University.

► This report and the forecasts in it were co-authored by Yoshihisa Inada and Mitsuru Shimoda from the Japan Applied Research Institute.

► This project is part of a 40-year research collaboration between young business professionals and academics, and its forecasts are used widely.

► The project was originally established by Chikashi Moriguchi and Kanemi Ban, Professors Emeritus of Osaka University. In 2005, we incorporated Current Quarter Model (CQM) forecasts into our quarterly macroeconomic forecast model.

► Aiming to provide a timely response to changes in the economy, this report has been published quarterly since 2004.

Forecast Highlights

Persistently high inflation and weak private demand

- Real GDP growth forecast: +1.5% in FY 2023, +1.2% in FY 2024, +1.0% in FY 2025 -

- ◆ According to the first official advance estimates released on September 15, Japan's real Q3 GDP (555.1 trillion yen, annualized) shrank by -2.1% QoQ, marking the first decline in three quarters. Q2 GDP had exceeded the pre-pandemic peak (557.4 trillion yen in Q3 2019) for the first time in 15 quarters, but Q3 GDP slid back to a level of -0.4% below the peak. Due to inflation, however, nominal GDP in Q3 (588.5 trillion yen) did exceed the pre-pandemic peak (561.6 trillion yen) for the third consecutive quarter.
- ◆ Q3 GDP growth was much lower than the final market consensus forecast (-0.42% QoQ). On the other hand, APIR's expenditure-side CQM final forecast was -1.8% QoQ, almost in the bull's eye.
- ◆ In terms of contributions to real GDP growth in Q3 (-0.5% QoQ), domestic demand made a negative contribution for the second consecutive quarter with -0.4 percentage points (pp). Therein, private-sector demand made a negative contribution for the second consecutive quarter at -0.4 pp, a result of declines in all of its components: private final consumption expenditures (-0.0 pp), private residential investment (-0.1 pp), private non-residential investment (-0.6 pp), and private inventory changes (-0.3 pp). On the other hand, public demand made a small positive contribution for the fourth consecutive quarter with +0.0 pp. Finally, net exports made a negative contribution for the first time in two quarters, with -0.1 pp.
- ◆ We have revised our outlook for the Japanese economy in FY2023-24 by incorporating the first official advance GDP estimate for 2023 Q3 as well as new exogenous variables. This report also features our first forecast for FY 2025. We now project real GDP growth of +1.5% in FY 2023, +1.2% in FY 2024, and +1.0% in FY 2025. The FY 2023 forecast was revised down by -0.5 pp from our last report, largely due to the large downward revision in private demand, which offset the higher contribution of net exports. On the other hand, the FY 2024 forecast was revised up by +0.1 pp due to a positive revision in net exports.
- ◆ Domestic demand made a negative contribution in the first two quarters of FY 2023. Since real wages are not expected to grow, the recovery in private consumption will be modest in the second half of the year, resulting in a small negative contribution to private demand in FY 2023. On the other hand, the trade deficit will narrow, partly due to improved terms of trade, and service exports will increase thanks to inbound tourism, resulting in a large positive contribution by net exports in FY 2023. Due to the persistently high inflation, real wages are not expected to start growing until the second half of 2024. As a result, the contribution of private demand in FY 2024-25 will be modest, and the contribution of net exports is expected to decline too.
- ◆ Consumer price inflation, which remained in the 3% range in the first half of FY 2023, will gradually decelerate. As a result, we forecast consumer price inflation to be +2.8% in FY 2023, +1.9% in FY 2024, and +1.4% in FY 2025. Compared to our previous forecast, the figures are up by 0.1 pp in FY 2023 and +0.4 pp in FY 2024, reflecting the current depreciation of the yen. The GDP deflator will rise by +3.1% in FY 2023 due to a significant improvement in the terms of trade from the previous year. The GDP deflator is projected to be +0.5% in FY 2024 and +1.2% in FY 2025, reflecting the improved terms of trade.

Forecast Summary

	Current forecast (2023/11/29)				Previous forecast (2023/8/29)			
	2022	2023	2024	2025	2021	2022	2023	2024

[Contributions to real GDP growth (% pt)]

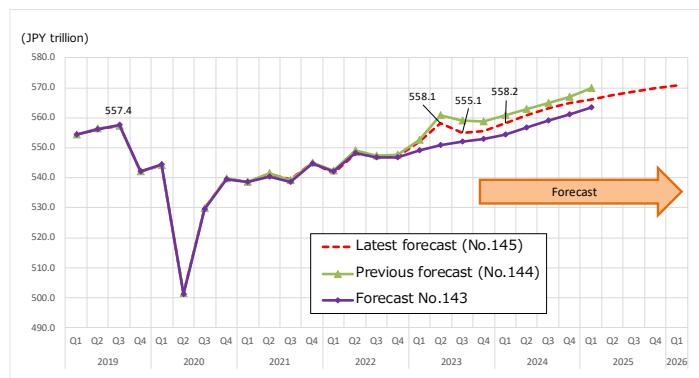

[Large downward correction in FY2023, small upward correction in FY24]

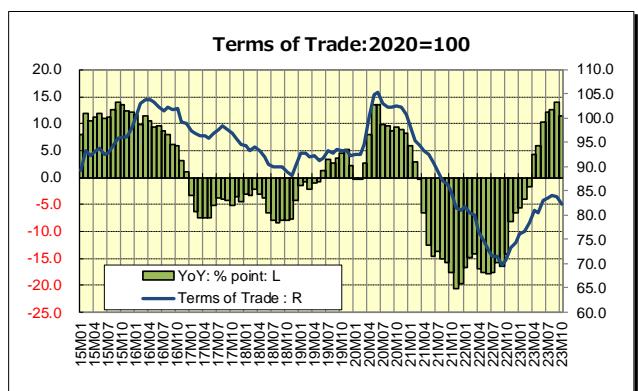

Note: Due to rounding, the total contribution of demand components does not necessarily match the real GDP growth rate.

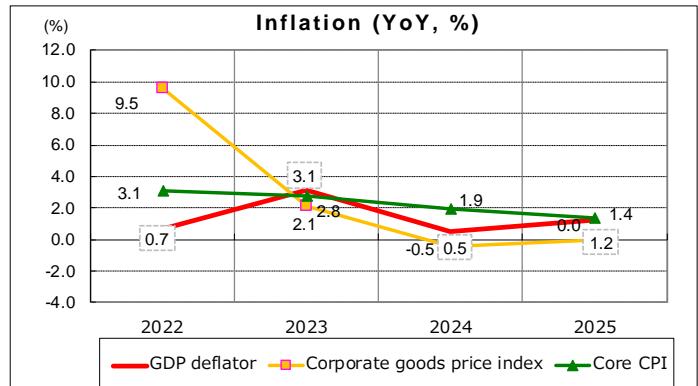

[Negative growth in 2023Q3, forecast path revised downward]

[Terms of Trade Significantly Improved in 2023]

[FY2023/24 inflation rate revised upward from the previous rate.]

Notes: SNA = System of National Accounts. In the quarterly statistics, the figures in the first and second rows below the main series represent QoQ changes (%) and YoY changes (%) respectively. In the annual statistics, the figures under the main series represent YoY changes (%). Highlighted columns represent actual values.
